

SUNNY SOLANKI

Software Developer | Java Full Stack Developer | Spring Boot | React

Ahmedabad, India | +91 63515 03193 | sunnysolanki74860@gmail.com |  LinkedIn |  GitHub

WORK EXPERIENCE

Software Developer — NetAI, Ahmedabad | Apr 2025 – Present

AI-powered network monitoring platform

- Built React and TypeScript dashboards for an AI-powered network monitoring platform, covering AWS onboarding, agent installation, instance metrics, alarms, Kubernetes observability, and root-cause-analysis workflows.
- Prevented cross-tab customer/site data leakage by developing a tab-isolated multi-site context system used across 326 modules.
- Reduced high-volume UI freezes by migrating 17 charts to canvas-based ECharts and virtualizing live-log views to nearly 30 mounted rows with debounced WebSocket batching.
- Engineered force-graph topology rendering using d3-force and canvas, owning nearly 30% of the link-drawing engine, failure-path animations, pause/resume behavior, and node/link tooltips.
- Integrated REST APIs, WebSocket streams, Google Chat human handoff over GCP Pub/Sub, Apollo.io lead capture, RBAC permission handling, and session-revocation flows.
- Contributed Python FastAPI lead-generation workflows for lead capture, validation, processing, and integration with internal sales/product analytics.

PROJECTS

Fixonaut — Multi-Tenant Field Service Management Platform | Java 21, Spring Boot 3, Spring Security, JWT, PostgreSQL, React, Docker

- Built a production-style modular monolith for repair businesses to manage customers, assets, technicians, service requests, scheduling, inventory, quotes, invoices, audit history, and dashboards.
- Developed secure REST APIs with Spring Boot, JWT authentication, RBAC, DTO mapping, validation, pagination, global exception handling, OpenAPI documentation, and Actuator health checks.
- Implemented organization-based multi-tenancy with authenticated tenant context, repository-level scoping, and tests preventing users from accessing another organization's data.
- Designed a service-request state machine using command endpoints and status-history records for NEW, ASSIGNED, ACCEPTED, IN_PROGRESS, WAITING_PART, COMPLETED, and CANCELLED workflows.
- Protected inventory consistency by implementing transactional stock deduction, traceable inventory movements, and locking logic to prevent negative stock during concurrent part usage.
- Built React and TypeScript UI with Vite, React Router, TanStack Query, Zustand, Docker Compose, GitHub Actions CI, JUnit, Mockito, Testcontainers, Vitest, and Playwright tests.

Collaborative Code Editor with AI Code Generation | React, Node.js, Express, MongoDB, Socket.IO, Monaco Editor, WebContainer API

- Engineered a multi-user browser-based code editor with real-time code sync, chat, file synchronization, and in-browser Node.js project execution using WebContainer API.

SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL

Backend: Java 21, Spring Boot 3, Spring Security, JWT, Spring Data JPA, Hibernate, REST APIs, Maven, FastAPI, Node.js, Express

Frontend: React, TypeScript, Vite, React Router, TanStack Query, Zustand, Redux, Tailwind CSS, ECharts, WebSockets

Databases / DevOps / Testing: PostgreSQL, MySQL, MongoDB, Flyway, Docker, Docker Compose, Git, GitHub Actions, Postman, OpenAPI, JUnit 5, Mockito, Testcontainers, Vitest, Playwright, AWS EC2, AWS CloudWatch, GCP Pub/Sub

EDUCATION

B.Tech in Computer Science — Indus University, Ahmedabad | Oct 2021 – Jun 2025

CGPA: 9.6/10
