SUMMARY

Software Engineer with 1+ year of professional experience and hands-on expertise building scalable Java backend systems using Spring Boot, PostgreSQL, Redis, and MongoDB through production-grade projects. Strong foundation in distributed systems, REST API design, caching architecture, application security, and performance optimization, with working full-stack fluency in React.

WORK EXPERIENCE

Software Engineer — NetAI (AI-powered network monitoring platform)

Apr 2025 – Jul 2026

- Owned the frontend for the platform's AWS cloud-monitoring module — built account onboarding, agent installation, and the metrics/alarms pipeline UI
- Designed a tab-isolated multi-site context system now adopted across 326 modules, eliminating a class of cross-tab data-leakage bugs
- Identified rendering bottlenecks and introduced canvas-based charting (ECharts) and list virtualization to the product for the first time — migrating 17 dashboard charts and virtualizing live-log views with debounced WebSocket batching, eliminating multi-second UI freezes under high-volume streams
- Led Kubernetes observability development — cluster, node, and pod dashboards with 2D cluster topology visualization (react-force-graph, D3), backed by live health-metric ingestion and WebSocket-driven real-time alert delivery
- Integrated an AI support chatbot with Google Chat over Pub/Sub for live human handoff, and hardened access with fail-closed RBAC and server-driven session revocation

PROJECTS

NexCode — Real-Time Collaborative IDE — Java, Spring Boot, MongoDB, Redis, React, WebSockets

[Live](#) | [Code](#)

- Built a Spring Boot backend (Maven, layered controller–service–repository) with Spring Data MongoDB and JWT auth — 27 REST endpoints plus a real-time layer of 11 STOMP WebSocket channels driving sub-100ms multi-user code, cursor, and file-tree sync
- Implemented 3-tier RBAC (admin / read-write / read-only), Redis token-blacklist logout, and time-boxed shareable invite links; validated requests with Jakarta Bean Validation and a global exception handler
- Integrated a Gemini AI assistant (via WebClient with retry/backoff) that generates complete multi-file project scaffolds, executed fully in-browser through the WebContainer API

LinkForge — Distributed URL Shortener — Java 21, Spring Boot 3.5, PostgreSQL, Redis, React, Docker

[Live](#) | [Code](#)

- Read path never hits the database on a cache hit — two-tier Caffeine + Redis cache, cross-node invalidation over pub/sub, and a Resilience4j fallback to PostgreSQL when Redis is down
- Coordination-free code generation — nodes lease ID blocks 10,000 at a time, permuted through a Feistel network before Base62: no collision check, no per-write round trip
- Clicks buffered into a Redis stream and batch-written to month-partitioned tables; 3 stateless nodes behind nginx, GitHub Actions CI running 44 end-to-end checks on real PostgreSQL and Redis

SKILLS

Languages: Java, JavaScript, TypeScript, SQL

Backend (Java): Spring Boot, Spring Data JPA, Hibernate, Spring Security, JWT, Flyway, REST APIs

Frontend: React, Next.js, Redux, Zustand, React Query, Tailwind CSS, ECharts, D3.js, react-force-graph, WebSockets

Databases & Caching: PostgreSQL, Redis, MySQL, MongoDB, Caffeine

Testing: JUnit

Tools & DevOps: Docker, Maven, Git, GitHub Actions, Postman, Swagger

AI-Assisted Development: GitHub Copilot, Claude, Cursor

EDUCATION

B.Tech in Computer Science — Indus University, Ahmedabad

Oct 2021 – Jun 2025 | CGPA: 9.6/10
